// LOGPOINT

 Website

 LinkedIn

Operating as a strong European cybersecurity platform, Logpoint is pushing forward growth and innovation across its unified operations stack.

Supported by Summa Equity, the company’s architecture combines SIEM, SOAR and analytics to improve enterprise resilience in Europe. In July 2025, Logpoint published a detection advisory for the AI-powered “LameHug” malware, illustrating its proactive threat intelligence and AI-driven detection capabilities.

Together, these initiatives reinforce Logpoint’s mission of equipping organisations to respond to evolving cyber threats.

 CYBLE®

 Website

 LinkedIn

With strong visibility on G2 and rising client acclaim, Cyble is broadening its global reach in threat intelligence and cyber risk management.

Its AI-powered platform tracks dark web activity, attack surfaces and emerging vulnerabilities. In August 2025, Cyble released a vulnerability research report spotlighting active exploits, reinforcing its reputation for delivering timely and actionable insights.

These moves highlight the company’s growing influence in helping organisations anticipate and pre-empt cyber threats more effectively.

SEPIO

 Website

 LinkedIn

Focused on hardware-based risk management and device visibility, Sepio Systems continues to innovate in a niche often overlooked by traditional security tools.

Cited by CB Insights, the company extends its reach into IT, OT and IoT domains. In mid-2025, Sepio announced a collaboration with Lenovo ThinkShield to strengthen hardware defence through integrated visibility.

These developments underscore Sepio’s commitment to helping organisations secure unmanaged or rogue devices before they become attack vectors.

 Website

 LinkedIn

Positioning itself as a next-generation vulnerability management leader, Holm Security has rolled out enhancements that improve predictive and remediation workflows.

In June 2025, the firm published a security update addressing AI threat detection, credential abuse and zero-day exploit trends. Earlier in the year, it introduced features like exploit scoring, smarter grouping and expanded asset discovery.

These advances reflect Holm’s intent to arm organisations with sharper, data-driven tools to stay ahead of risk.

 Website

 LinkedIn

Aiming to standardise continuous penetration testing in the CEE region, Plainsea is evolving its AI-powered platform to automate critical tasks such as scoping, CVE enrichment and real-time remediation collaboration.

The company launched new workflow enhancements In Q3 2025, to streamline pentesting and deepen synergy between security providers and internal teams.

Key steps recently taken by Plainsea help to support their vision of making continuous, automated testing a baseline for proactive security.

 Website

 LinkedIn

Driving digital sovereignty across Europe, KOBIL is scaling its Secure SuperApp platform which brings identity, payments, communication and micro-apps into one cohesive ecosystem.

During Q3 2025, the firm confirmed its presence in eight Gartner Hype Cycles and rolled out a major platform update, cementing its status as a uniquely European vendor.

These developments reinforce KOBIL’s ambition to empower enterprises and governments with secure, sovereign digital frameworks.

 LinkedIn

Envisioning a shift in application security, OX Security introduced its AI assistant “Agent OX” in Q3 2025, enabling one-click custom code fixes for known vulnerabilities.

The platform filters noisy data to surface only the top 5% of risks that matter most and delivers snapshot recommendations to simplify remediation.

By embedding security insights directly into the development lifecycle, OX is moving toward frictionless, developer-centric protection.

 Website

 LinkedIn

Orchid Security is pushing the envelope in identity orchestration by utilising LLMs to map application authentication flows and surface hidden exposure risks.

The company launched a SailPoint-certified orchestration module enabling automatic application onboarding, dynamic risk scoring and seamless IAM/IGA integration.

These capabilities help organisations move from fragmented identity stacks to harmonised, AI-driven identity security postures. This addresses a significant pain point, and positions the company as an innovator in the industry.

 LinkedIn

Best known for SAP-native cybersecurity, SecurityBridge made waves in July 2025 by acquiring UK-based CyberSafe, an MFA and SSO specialist for SAP users.

This integration brings TrustBroker capabilities into its platform, enabling contextual, risk-based authentication across SAP workflows.

The acquisition marks a significant step in enabling dynamic, passwordless access within critical enterprise systems and reinforces SecurityBridge’s position as a trusted SAP cybersecurity leader.
